

Problem 1.

Given the following Diagram, write the necessary Django Models. Find ways to optimize the schema.

Problem 2

From the above models, create admin pages for Product.

The "Product" Admin Change List page, should mention the company, country availability (stock) and country prices.

Problem 3

Using Tastypie, Django Rest Framework or similar, create the following json endpoints for “Country” Model above.

/api/products

/api/products?company=[company_id]

/api/products/[product_id]

/api/products/[product_id]/countries
